## Disclaimer

SolidProof.io reports are not, nor should be considered, an “endorsement” or “disapproval” of any particular project or team. These reports are not, nor should be considered, an indication of the economics or value of any “product” or “asset” created by any team. SolidProof.io do not cover testing or auditing the integration with external contract or services (such as Unicrypt, Uniswap, PancakeSwap etc’...)

**SolidProof.io Audits do not provide any warranty or guarantee regarding the absolute bug- free nature of the technology analyzed, nor do they provide any indication of the technology proprietors. SolidProof Audits should not be used in any way to make decisions around investment or involvement with any particular project. These reports in no way provide investment advice, nor should be leveraged as investment advice of any sort.**

SolidProof.io Reports represent an extensive auditing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology. Blockchain technology and cryptographic assets present a high level of ongoing risk. SolidProof’s position is that each company and individual are responsible for their own due diligence and continuous security. SolidProof in no way claims any guarantee of security or functionality of the technology we agree to analyze.

## Description

It all started a couple of years ago, we were here as investors, and we understand perfectly what an investor craves, that's why we finally decided to create the project we'd buy, support, and hype, 4 of us are currently working on the project, two persons will be completely devoted and dedicated to the community, we'll listen to you, and the rest of the team will focus on the farming experience and developing, as you can see we are a whole team striving for success.

## Project Engagement

During the 15th of February 2022, **Kyrios Finance Team** engaged Solidproof.io to audit smart contracts that they created. The engagement was technical in nature and focused on identifying security flaws in the design and implementation of the contracts. They provided Solidproof.io with access to their code repository and whitepaper.

  - Comit: 4465ef9ec9b690db13be12798a42a88ecafbcbf9

# Vulnerability & Risk Level

Risk represents the probability that a certain source-threat will exploit vulnerability, and the impact of that event on the organization or system. Risk Level is computed based on CVSS version 3.0.

Level	Value	Vulnerability	Risk (Required Action)
<b>Critical</b>	9 - 10	A vulnerability that can disrupt the contract functioning in a number of scenarios, or creates a risk that the contract may be broken.	Immediate action to reduce risk level.
<b>High</b>	7 – 8.9	A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.	Implementation of corrective actions as soon as possible.
<b>Medium</b>	4 – 6.9	A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.	Implementation of corrective actions in a certain period.
<b>Low</b>	2 – 3.9	A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.	Implementation of certain corrective actions or accepting the risk.
<b>Informational</b>	0 – 1.9	A vulnerability that have informational character but is not effecting any of the code.	An observation that does not determine a level of risk

# Auditing Strategy and Techniques Applied

Throughout the review process, care was taken to evaluate the repository for security-related issues, code quality, and adherence to specification and best practices. To do so, reviewed line-by-line by our team of expert pentesters and smart contract developers, documenting any issues as there were discovered.

## **Methodology**

The auditing process follows a routine series of steps:

1. Code review that includes the following:
  - i) Review of the specifications, sources, and instructions provided to SolidProof to make sure we understand the size, scope, and functionality of the smart contract.
  - ii) Manual review of code, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
  - iii) Comparison to specification, which is the process of checking whether the code does what the specifications, sources, and instructions provided to SolidProof describe.
2. Testing and automated analysis that includes the following:
  - i) Test coverage analysis, which is the process of determining whether the test cases are actually covering the code and how much code is exercised when we run those test cases.
  - ii) Symbolic execution, which is analysing a program to determine what inputs causes each part of a program to execute.
3. Best practices review, which is a review of the smart contracts to improve efficiency, effectiveness, clarify, maintainability, security, and control based on the established industry and academic practices, recommendations, and research.
4. Specific, itemized, actionable recommendations to help you take steps to secure your smart contracts.

## Used Code from other Frameworks/Smart Contracts (direct imports)

Imported packages:

Context

 SafeMath

Ownable

 Address

IBEP20

BEP20

ReentrancyGuard

Context

 SafeMath

Ownable

 Address

IBEP20

BEP20

KyriosT

 SafeBEP20

MasterChef

## Tested Contract Files

This audit covered the following files listed below with a SHA-1 Hash.

*A file with a different Hash has been modified, intentionally or otherwise, after the security review. A different Hash could be (but not necessarily) an indication of a changed condition or potential vulnerability that was not within the scope of this review.*

### v1.0

File Name	SHA-1 Hash
contracts/MasterChef.sol	e4c80c2a159c05f368473b606eaa3bc01d519055
contracts/KyriosT.sol	20e88a098fcf6612d9ffb35df0da803e145c67da
contracts/Timelock.sol	f2d05d94708fc4dabd8d4d3be155a14b5c8a35c3

# Metrics

## Source Lines v1.0

## Risk Level v1.0

## Capabilities

### Components

Version	Contracts	Libraries	Interfaces	Abstract
1.0	6	6	2	5

### Exposed Functions

*This section lists functions that are explicitly declared public or payable. Please note that getter methods for public stateVars are not included.*

Version	Public	Payable
1.0	89	2

Version	External	Internal	Private	Pure	View
1.0	36	176	3	41	49

### State Variables

Version	Total	Public
1.0	47	28

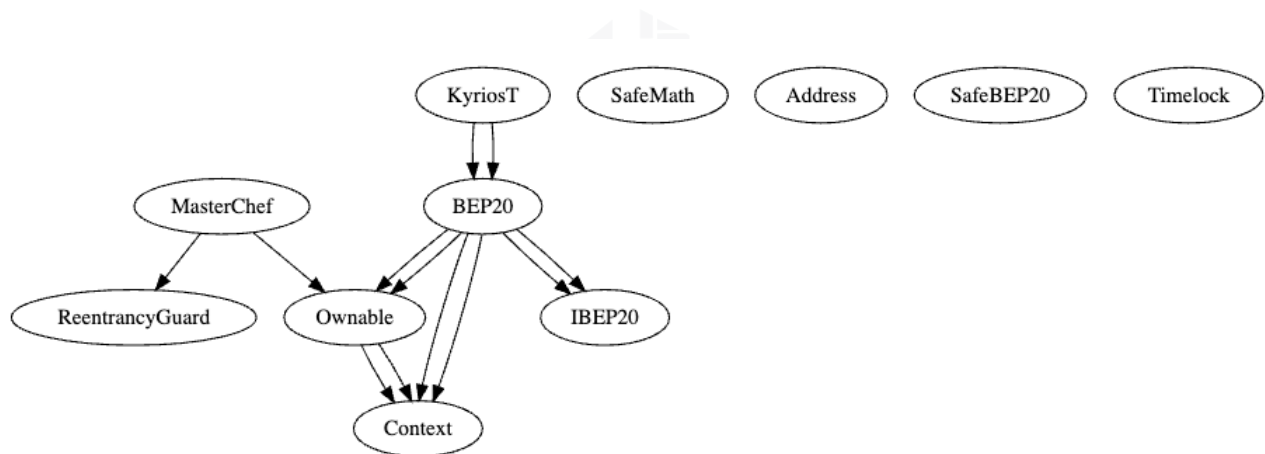

### Capabilities

Version	Solidity Versions observed	Experimental Features	Can Receive Funds	Uses Assembly	Has Destroyable Contracts
1.0	0.6.12		yes	yes (6 asm blocks)	

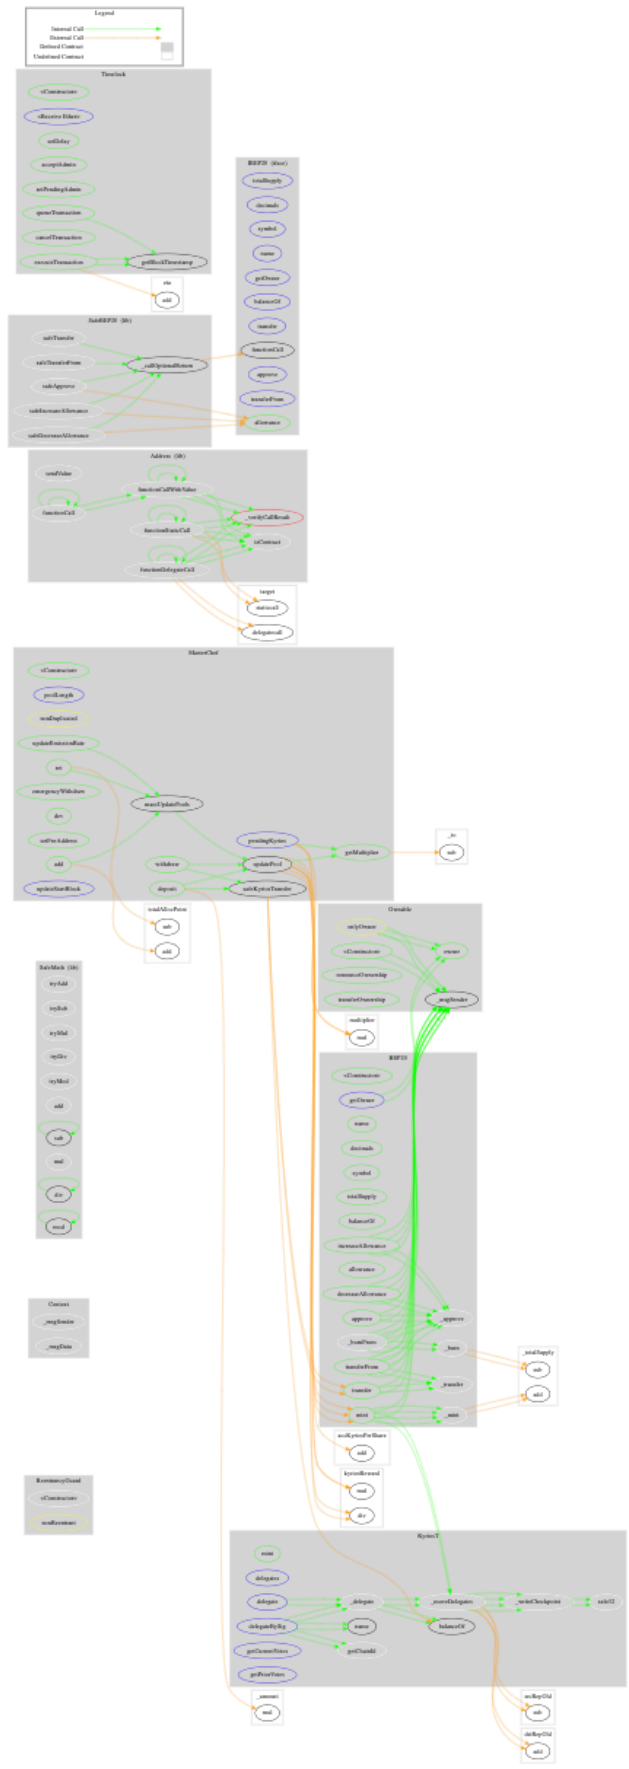

Version	Transfers ETH	Low-Level Calls	DelegateCall	Uses Hash Functions	EC Recover	New/Create/Create2
---------	---------------	-----------------	--------------	---------------------	------------	--------------------

1.0	yes		yes	yes	yes	
-----	-----	--	-----	-----	-----	--

## Inheritance Graph v1.0

# CallGraph v1.0

## Scope of Work/Verify Claims

The above token Team provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract (usual the same name as team appended with .sol).

We will verify the following claims:

1. Correct implementation of Token standard
2. Deployer cannot mint any new tokens
3. Deployer cannot burn or lock user funds
4. Deployer cannot pause the contract
5. Overall checkup (Smart Contract Security)

### Correct implementation of Token standard

Function	Description	Exist	Tested	Verified
TotalSupply	provides information about the total token supply	✓	✓	✓
BalanceOf	provides account balance of the owner's account	✓	✓	✓
Transfer	executes transfers of a specified number of tokens to a specified address	✓	✓	✓
TransferFrom	executes transfers of a specified number of tokens from a specified address	✓	✓	✓
Approve	allow a spender to withdraw a set number of tokens from a specified account	✓	✓	✓
Allowance	returns a set number of tokens from a spender to the owner	✓	✓	✓

## Write functions of contract v1.0

add	approve
deposit	decreaseAllowance
dev	delegate
emergencyWithdraw	delegateBySig
massUpdatePools	increaseAllowance
renounceOwnership	mint
set	mint
setFeeAddress	renounceOwnership
transferOwnership	transfer
updateEmissionRate	transferFrom
updatePool	transferOwnership
updateStartBlock	
withdraw	

acceptAdmin
cancelTransaction
executeTransaction
queueTransaction
setDelay
setPendingAdmin

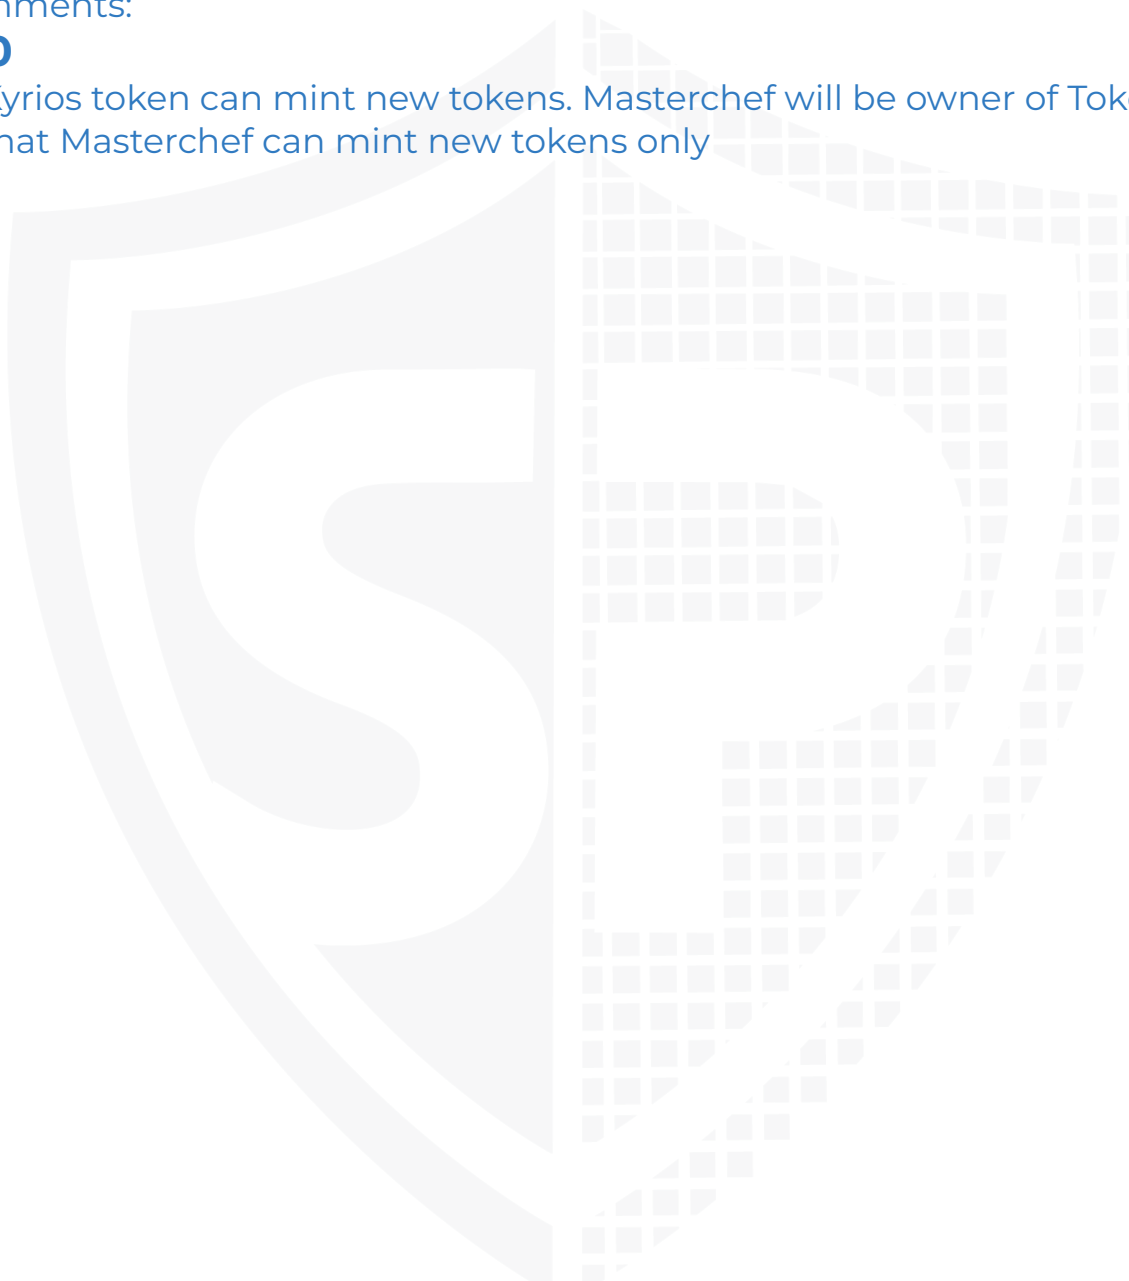

## Deployer cannot mint any new tokens

Name	Exist	Tested	Status
Deployer cannot mint	✓	✓	✗

Comments:

### v1.0

- Kyrios token can mint new tokens. Masterchef will be owner of Token, that Masterchef can mint new tokens only

## Deployer cannot burn or lock user funds

Name	Exist	Tested	Status
Deployer cannot lock	✓	✓	✓
Deployer cannot burn	✓	✓	✓

## Deployer cannot pause the contract

Name	Exist	Tested	Status
Deployer cannot pause	—	—	—

## Overall checkup (Smart Contract Security)

Tested	Verified
✓	✓

### Legend

Attribute	Symbol
Verified / Checked	✓
Partly Verified	⚠
Unverified / Not checked	✗

# Modifiers and public functions

v1.0

- ▼  **mint**
  - Ⓜ onlyOwner
  -  **delegate**
  -  **delegateBySig**

-  **transfer**
-  **approve**
-  **transferFrom**
-  **increaseAllowance**
-  **decreaseAllowance**
- ▼  **mint**
  - Ⓜ onlyOwner

- ▼  **renounceOwnership**
  - Ⓜ onlyOwner
- ▼  **transferOwnership**
  - Ⓜ onlyOwner

- ▼  **add**
  - Ⓜ onlyOwner
  - Ⓜ nonDuplicated
- ▼  **set**
  - Ⓜ onlyOwner
  -  **massUpdatePools**
  -  **updatePool**
- ▼  **deposit**
  - Ⓜ nonReentrant
- ▼  **withdraw**
  - Ⓜ nonReentrant
- ▼  **emergencyWithdraw**
  - Ⓜ nonReentrant
  -  **dev**
  -  **setFeeAddress**
- ▼  **updateEmissionRate**
  - Ⓜ onlyOwner
- ▼  **updateStartBlock**
  - Ⓜ onlyOwner

-  **setDelay**
-  **acceptAdmin**
-  **setPendingAdmin**
-  **queueTransaction**
-  **cancelTransaction**
-  **executeTransaction** 💰

## Comments

- Deployer can set following state variables without any limitations
  - totalAllocPoint
  - startBlock
- Deployer can enable/disable following state variables
  - poolInfo
  - poolExistence
- Dev address can set new dev address
- Fee address can set new fee address

**Please check if an OnlyOwner or similar restrictive modifier has been forgotten.**

# Source Units in Scope

## v1.0

Type	File	Logic Contracts	Interfaces	Lines	nLines	nSLOC	Comment Lines	Complex. Score	Capabilities
	contracts/MasterChef.sol	9	1	1518	1359	656	671	464	
	contracts/KyriosT.sol	6	1	1105	968	417	553	279	
	contracts/Timelock.sol	2	—	288	288	122	121	85	
	<b>Totals</b>	<b>17</b>	<b>2</b>	<b>2911</b>	<b>2615</b>	<b>1195</b>	<b>1345</b>	<b>828</b>	

## Legend

Attribute	Description
Lines	total lines of the source unit
nLines	normalized lines of the source unit (e.g. normalizes functions spanning multiple lines)
nSLOC	normalized source lines of code (only source-code lines; no comments, no blank lines)
Comment Lines	lines containing single or block comments
Complexity Score	a custom complexity score derived from code statements that are known to introduce code complexity (branches, loops, calls, external interfaces, ...)

# Audit Results

# AUDIT PASSED

## Critical issues

**No critical issues**

## High issues

**No high issues**

## Medium issues

**No medium issues**

## Low issues

Issue	File	Type	Line	Description
#1	Main	Contract doesn't import npm packages from source (like OpenZeppelin etc.)	-	We recommend to import all packages from npm directly without flatten the contract. Functions could be modified or can be susceptible to vulnerabilities
#2	MasterC hef	Missing Zero Address Validation (missing-zero-check)	1329, 1330, 1494, 1500	Check that the address is not zero
#3	Timelock	Missing Zero Address Validation (missing-zero-check)	195, 257, 224	Check that the address is not zero
#4	MasterC hef	Local variables shadowing	902, 906, 909, 910, 730, 731, 666	Rename the local variables that shadow another component
#5	MasterC hef	Missing Events Arithmetic	1358, 1375	Emit an event for critical parameter changes

## Informational issues

**No informational issues**

### Audit Comments

We recommend you to use the special form of comments (NatSpec Format, Follow link for more information <https://docs.soliditylang.org/en/v0.5.10/natspec-format.html>) for your contracts to provide rich documentation for functions, return variables and more. This helps investors to make clear what that variables, functions etc. do.

#### 17. February 2022:

- Documentation tag on non-public state variables will be disallowed in 0.7.0 in L882. Use the @dev tag explicitly.
- Read whole report for more information

## SWC Attacks

The logo features the words "Solid Proofed" in a white, elegant script font. The text is superimposed on a dark blue background. Behind the text is a faint, stylized shield emblem. The shield has a checkered pattern on its right side and a solid blue area on its left. The overall design conveys a sense of security and reliability.
